Work Experience

2023 – present
Yangon, Myanmar

Senior Software Engineer, *AcePlusSolutions Company Limited*

- Built RESTful APIs for both web and mobile applications
- Built a reliable CI/CD pipeline using Ansible for containerized APIs, leveraging blue/green environments to deliver seamless, zero-downtime deployments.
- Utilized Docker and Linux OS for containerization and efficient application deployment.
- Advanced Monitoring and Observability: Developed comprehensive monitoring solutions using tools like Newrelic and Grafana.
- Deployed and maintained modern web applications
- Generated infrastructure diagrams from existing Terraform code, enhancing visibility, collaboration, and operational clarity.
- Experience with Docker, Linux OS and Agile Scrum Methodology
- Make technical decisions within the project and code refactors
- Resolved complex technical challenges with strong debugging and problem-solving skills.
- Providing code reviews and feedback to team members
- Identified and remediated critical security vulnerabilities uncovered during penetration testing.
- Mentored junior developers and standardized team coding practices.

08/2024 – 09/2025
Japan

DevOps Engineer, *Hivelocity (APS outsourced services)*

- Managed high-traffic fan event platforms, leveraging AWS scalability to deliver instant, reliable access during major releases.
- Built a resilient CI/CD pipeline for containerized APIs, implementing blue/green deployments to achieve seamless releases with zero downtime.
- Contributed to the migration of microservices and Hivelocloud API servers from EC2 to a containerized architecture, significantly boosting performance and scalability.
- Supported the transition to Aurora Serverless, improving database scalability, efficiency, and overall data retrieval performance.
- Developed infrastructure diagrams from existing Terraform code, enhancing visibility, collaboration, and operational clarity.

- Enhanced deployment and maintenance workflows by architecting and automating systems with Python, Terraform, and Ansible, resulting in greater operational efficiency
- Integrated Slack ChatOps with AWS ECS APIs, enabling real-time deployment control and monitoring through collaborative tools.
- Redefined service level objectives (SLOs) with New Relic and implemented proactive alerting integrated with Slack, improving incident response times and service reliability.
- Designed and executed load testing benchmarks and defined SLI/SLO metrics for new microservices, ensuring high service reliability, performance, and quality assurance.

12/2024 – 09/2026
Singapore

Software Engineer (Remote), *Leaptechnology*

- Developed an integrated management software system for interior design companies.
- Built RESTful APIs using Laravel with a Domain-Driven Design (DDD) architecture.
- Successfully resolved critical security vulnerabilities identified during a penetration test.
- Made key technical decisions and performed code refactoring within the project
- Reviewed code and provided feedback to team members.

Skills

Programming Language
Web Standard, HTML/CSS, JavaScript, jQuery, Bootstrap, Tailwind, PHP, Laravel Framework, React Js, TypeScript, Sass, WebPack, NextJS

Server
Linux, Ubuntu

Version Control
Git, GitLab

Cloud computing tools
AWS, Terraform, Ansible, DigitalOcean, GCP, K8

CI/CD Tools
GitHub Actions, CircleCI

Web Server
Nginx , Apache

Database
MySQL, PostgreSQL

Project Management Tool
Jira, Blue

Monitoring Tools
NewRelic, Grafana, Uptime Kuma

Education

University of Computer Studies (Monywa)
- Computer Science

Data Land Technology
- Web Development Foundation Course

Fairway Technology
- Certificate of Professional Web Developer Course
- Certificate of Rockstar Developer Course

Projects

Toyota Claim System
- Designed and implemented the Toyota Claim System using Next.js and Prisma, delivering a full-stack web application from architecture through deployment.

Cyber Owl
- Manekai Article Editor Migration

Starfish School Management System
Role
- Position: Backend Engineer (PHP, Laravel Framework)

Responsibility
- Maintained and released new features for web application

HR Management System(HR Master)
Role
- Position: FullStack Engineer (React JS, PHP, Laravel Framework)

Responsibility
- Deployed features and make technical decisions within the project and code refactors
- Providing code reviews and feedback to team members
- Google Cloud Console
- Follow up on flagged issues on the JIRA backlog and try to fix them during a penetration test

Starfish Online Learning Portal
Role
- Position: Backend Engineer (PHP, Laravel Framework)

Responsibility
- Deployed and maintained for web applications

Japan Job Fair Myanmar
Role
- Position: Backend Engineer (PHP, Laravel Framework)

Responsibility
- Develop new features for Japan Job Fair Myanmar Public Form
- Development and release on production

Customer Support Ticket Management System(TMS)
Role
- Position: FullStack Engineer (React JS, PHP, Laravel Framework)

Responsibility
- Deployed and maintained features and close to work with Project Manager and Team Lead
- Google Cloud Console
- Follow up on flagged issues on the JIRA backlog and try to fix them during a penetration test

PromoHub (Hackathon Challenge Project)
Role
- Position: Backend Engineer (PHP, Laravel Framework)

Responsibility
- Make technical decisions within the project and resolve technical challenges

Dashboard Admin Project with PHP/Laravel Framework
Role
- Position: Backend Engineer (PHP, Laravel Framework)

Responsibility
- Implement db design and new feature development

Android Management API
Implemented Android Management API (Python)
- Designed, developed and maintained backend APIs to manage Android devices, policies, and OTA workflows.

Restaurant Ordering System
- Developed a web application enabling customers to browse menus, customize items, and place orders online, with a separate admin panel for menu and order management.
- Implemented real-time order status tracking and role-based access (customer / staff / admin) using secure authentication.
- Designed a normalized MySQL schema for menus, orders, and payments, and built RESTful APIs consumed by the frontend.
- Integrated online payment and automated order notifications, reducing manual processing and order errors.

Summary

DevOps engineer with 3+ years of experience and a strong full-stack development background, spanning infrastructure as code, cloud deployment, and application development. Eager to join a dynamic organization that values dedication, where I can contribute meaningfully to challenging projects while continuing to grow professionally
